

Claims

1. A computer implemented system for automating a sequence of tasks, comprising:
- a first ActionDate component having an associated first ADate during which a task will automatically be executed; and
  - a first Action component associated with the first ActionDate component, the Action component performing a pre-configured task on the ADate associated with the first ActionDate;
  - a second ActionDate having an associated second ADate; and
  - the second ActionDate is associated with the first ActionDate by graphically connecting the second ActionDate to the first and the second ADate is determined by adding an offset value to the first ADate.
